

Monica Eriksson
née Sjöholm

Born in 1952, Lapträsk, Finland
Master of Social Science (Politics magister) Åbo Akademi University 1994
Licentiate in Social Science (Politics licentiate) Åbo Akademi University 1999
Studies at the Nordic School of Public Health 1998–1999
DrPH studies, the Nordic School of Public Health 2003–2005
Doctoral studies in Social Science, Åbo Akademi University Vasa 2005–
Social worker, Åland Central Hospital 1988–1991
Operative Director, Ålands Handikappförbund 1991–2000
Assistant Course Leader, Nordic School of Public Health 1999–2004
Public Health Investigator, Government of Åland 2000–2001
Investigator, Nordic Council of Ministers, Nordic Cooperation on Disability 2000–2003
Project Leader of the Salutogenic Project, Nordic School of Public Health 2003–2004
Researcher, Folkhälsan Research Centre, Health Promotion Research Programme 2005–

Twenty five years ago Aaron Antonovsky, a medical sociologist, raised the question why some people, in spite of major stressful situations and severe hardships, stayed healthy while others succumbed. As a scientific response he introduced the salutogenic concept of “sense of coherence” as a specific way to view life as comprehensible, manageable and meaningful. He claimed that the way people relate to their life has an influence on their health. Many scientific studies have applied this in practice using the SOCquestionnaire. The present research report gives the evidence base of salutogenic research as measured by Antonovsky’s SOC questionnaire. The review proves that the SOC questionnaire is a valid, reliable instrument for measuring health that also can be applied cross cultures. The SOC has a main, moderating and mediating effect on perceived health and quality of life. The stronger the SOC the better the perceived health and quality of life. The predicting capacity of the SOC is promising. The research synthesis concludes the salutogenic theory to be a valuable approach for public health and health promotion research and practice. The thesis itself can serve as an introduction to the salutogenic research framework and a handbook for the research community.

This research synthesis is a doctoral thesis in social policy at Faculty of Social and Caring Sciences, Department of Social Science/Social Policy, Åbo Akademi University Vasa, Finland. Monica Eriksson is a Researcher at Folkhälsan Research Centre, Health Promotion Research Programme in Helsinki, Finland.

Research Report 2007:1

UNRAVELLING THE MYSTERY OF SALUTOGENESIS

The evidence base of the salutogenic research as measured by Antonovsky’s Sense of Coherence Scale

Monica Eriksson

CONTENTS (Paper I – VIII)

INTRODUCTION

The salutogenic theory
Salutogenesis in the context of Public Health and Health Promotion development

METHODS

Inclusion and exclusion criteria
Search strategy
Material and procedure
Analysis
Analysis of drop-outs for the research synthesis

THE EVIDENCE BASE OF THE RESEARCH

Validity and reliability of the Orientation to Life Questionnaire/Sense of Coherence Scale
The relation with health
The relation with quality of life
Salutogenesis in a societal context: Åland – a special case?

CRITICISM OF THE THEORY AND CONVERGENT CONCEPTS

Criticism of the salutogenic theory
Salutogenesis and some convergent concepts

GENERAL DISCUSSION

Methodological considerations
The potential of Salutogenesis for health promotion and healthy public policy
The implementation of the salutogenic model in practice
Towards an expanded definition of health
Further research
